The Founding Partner Pilot.

See it working in your own rooms before you spend anything.

For commissioners, councils and care providers. Six pages.

Lets staff know when someone may need help.

- No camera and no microphone
- Nothing for the resident to wear, press, remember or charge
- Staff are told when someone is up and has not returned, or may be on the floor
- Every alert is logged, with analytics on nights, alerts and response times
- Works alongside the equipment you already have

Beacon Halo is health IT, not a medical device. It informs staff. It never makes a clinical decision.

Five steps. Ten weeks.

1. **Choose 3 to 5 rooms**
   For the people you're most concerned about.

2. **We install, set up and train**
   Your team only needs to respond to alerts.

3. **A settling-in week, then 8 weeks live**
   Your usual checks carry on alongside it.

4. **An outcomes report for your board**
   Before and after, ready for a senior management paper.

5. **Founding pricing, fixed for 12 months**
   Sized so a first rollout can sit within your own quotation rules.

£0

- Sensors for 3 to 5 rooms
- Installation and set-up
- Staff training
- Support throughout
- Your outcomes report

OUR PROMISE

If it doesn’t earn its place, we take it off the wall.

No obligation to continue. No cost to you if it isn't right. You keep the outcomes report either way.

Can Beacon Halo get it wrong?

Yes.

No sensor is perfect. That is why your usual checks carry on, and staff always decide what to do. In the settling-in week we tune Halo for each room.

Your pilot report shows exactly how it performed in your rooms.

Built to the standards you buy against.

- ✓ Health IT, not a medical device
- ✓ £1 million public liability insurance
- ✓ TSA member
- ✓ ICO registered
- ✓ UK patent application filed
- ✓ QSF certification (TEC Quality) in progress

HOW TO START

Book a 20-minute demo at beaconhalo.co.uk

Pilot terms are agreed in writing before installation.
